Message from the Guest Editors

The purpose of this Special Issue is to present advanced research into the molecular mechanisms underlying interactions between cancer and immune cells in gynecological cancers. We invite authors to submit original research articles and reviews that focus on interactions between cancer and immune cells in terms of molecular mechanisms. We also invite authors to contribute articles that present exclusively molecular research on gynecological cancers, as well as research solely on cancer immunology. This Special Issue will be devoted to research on molecular interaction networks, new biomarkers, therapeutic targets, innovative cancer therapy, as well as research on the anticancer activity of compounds, including compounds of natural origin and their derivatives. Articles concerning the molecular mechanisms of drug resistance and toxicity of anticancer compounds are also welcome.

Deadline for manuscript
submissions:

30 November 2022
